# TITUS Message Classification™

for Microsoft Outlook Web App®

Many organizations allow their employees to access email through Web browsers to provide a more flexible work environment. Microsoft Outlook Web App provides users with a familiar email experience across both Windows and Mac platforms. While convenient for users, this application can make organizations more vulnerable to data leakage.

TITUS Message Classification for Outlook Web App is a classification and policy enforcement tool that ensures all Microsoft Outlook Web App (OWA) emails are classified before they are sent. The solution brings the familiar features of TITUS Message Classification™ for Outlook® to the OWA environment, including support for customizable labels and a simple, intuitive user interface that integrates into the regular OWA workflow. In addition to enforcing email classification, the solution can also restrict the viewing and distribution of sensitive information over OWA, helping to prevent data loss.

Classifications are simple to select from the integrated toolbar in OWA

Highlights

TITUS Message Classification for OWA is an email labeling solution for Microsoft Outlook Web App that can allow OWA users to select classifications before sending an email. Based on these classifications, organizations can:

- Prevent inadvertent disclosure of sensitive information from OWA
- Raise user awareness by clearly identifying sensitive information
- Restrict the type of information that users can view over OWA
- Meet compliance needs

System Requirements

The solution is designed for Microsoft Exchange® Server 2007, and 2010, and supports Internet Explorer® for Windows®, Mozilla Firefox® and Google Chrome® for both Windows and Mac platforms, and Safari® for Mac.

Complementary TITUS Products

The classification properties assigned by TITUS Message Classification for OWA are fully interoperable with the properties assigned by TITUS Message Classification for Outlook.

Message Classification Features and Benefits

Key Features	Benefits
Classification Selector	Prompts users to classify all OWA emails, enabling organizations to enforce their classification policies in a simple, non-intrusive way.
Visual Markings	Applies visual markings in the email subject line and message body to clearly identify the sensitivity of the information.
Metadata Assist	Stores user classification selections with the email as persistent metadata, which can be used to increase the accuracy and effectiveness of DLP, archiving, and perimeter security solutions.
Policy Enforcement	Inspects the email for policy violations before the message leaves the desktop, and provides instant feedback so that the sender can correct any problems. Policies can be triggered by validating recipients, checking for existing email classifications and much more.
Security Enablement	Adds an extra layer of security by automatically encrypting sensitive emails. This feature requires S/MIME certificates.
Administration	Enables organizations to centrally configure and deploy their classification labels and policies.

About TITUS

TITUS is a leading provider of security and data governance software that helps organizations share information securely while meeting policy and compliance requirements. With over 2 million users worldwide, our solutions enable enterprises, military and government organizations to classify information and meet regulatory compliance by securing unstructured information. Products include TITUS Classification, the leading message, document and file classification and labeling solutions that enhance data loss prevention by involving end users in identifying sensitive information; and the TITUS family of classification and security solutions for Microsoft SharePoint. TITUS solutions are deployed within over 450 organizations around the world, including Dow Corning, United States Air Force, NATO, Pratt and Whitney, Canadian Department of National Defence, Australian Department of Defence, and the U.S. Department of Veterans Affairs.
