

Nessus® Perimeter Service™

with Tenable PCI Scanning Service

Product Overview

As an Approved Scanning Vendor (ASV), Tenable Network Security® helps businesses ensure the safety and security of payment card data, identify network and web application vulnerabilities “from the cloud,” and demonstrate compliance with the PCI Data Security Standard (PCI DSS). Tenable Nessus® Perimeter Service™ including the Tenable PCI Scanning Service is an on-demand, hosted service which audits Internet-facing systems for network and web application vulnerabilities.

Features

Based on Nessus — the World’s Leading Vulnerability Scanner

The Perimeter Service is based on the Nessus vulnerability scanner with an interface and functionality that are familiar to numerous security professionals around the globe. A favorite among security practitioners and auditors alike, Nessus is rated among the top products of its type throughout the security industry, is endorsed by professional security organizations such as the SANS Institute, and has been downloaded more than ten million times to date.

Accurate, Secure Scan Results

Nessus Perimeter Service is supported by a world-renowned research team and accesses Tenable’s continuously-updated database of more than 55,000 vulnerability and configuration checks. Web-facing applications can be scanned for vulnerabilities that may increase an organization’s exposure to risk. Security assessments are conducted against the current PCI standards.

Scans can be scheduled to run automatically or performed on demand and use end-to-end encryption for secure communication. When used in conjunction with Tenable SecurityCenter™, network scoping occurs so only PCI-relevant assets are scanned, reducing complexity and time.

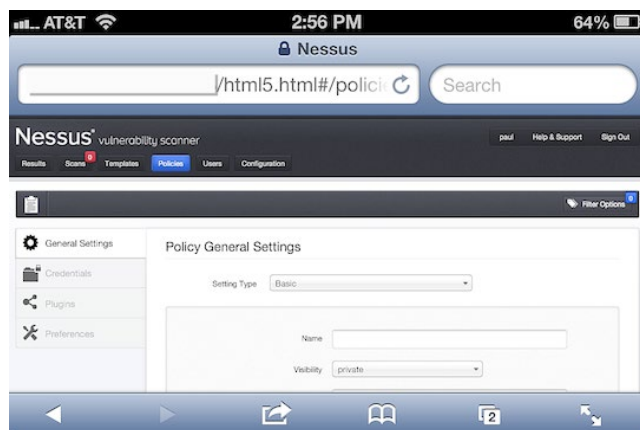

Easy Remediation, PCI Validation, and Report Generation

Nessus Perimeter Service provides secure access to detailed vulnerability audits and remediation information. PCI scan results may be disputed by the customer and are swiftly validated by Tenable’s PCI-certified professionals. Executive, attestation, and detailed reports are easily generated, offering proof of compliance needed for submission to an acquiring bank.

Anywhere, Anytime Access

Service access to scan, submit, review results, and generate reports is available from any Internet browser.

As a managed service, Nessus Perimeter Service requires no hardware or software installation, and no ongoing maintenance. Set-up can be accomplished in minutes.

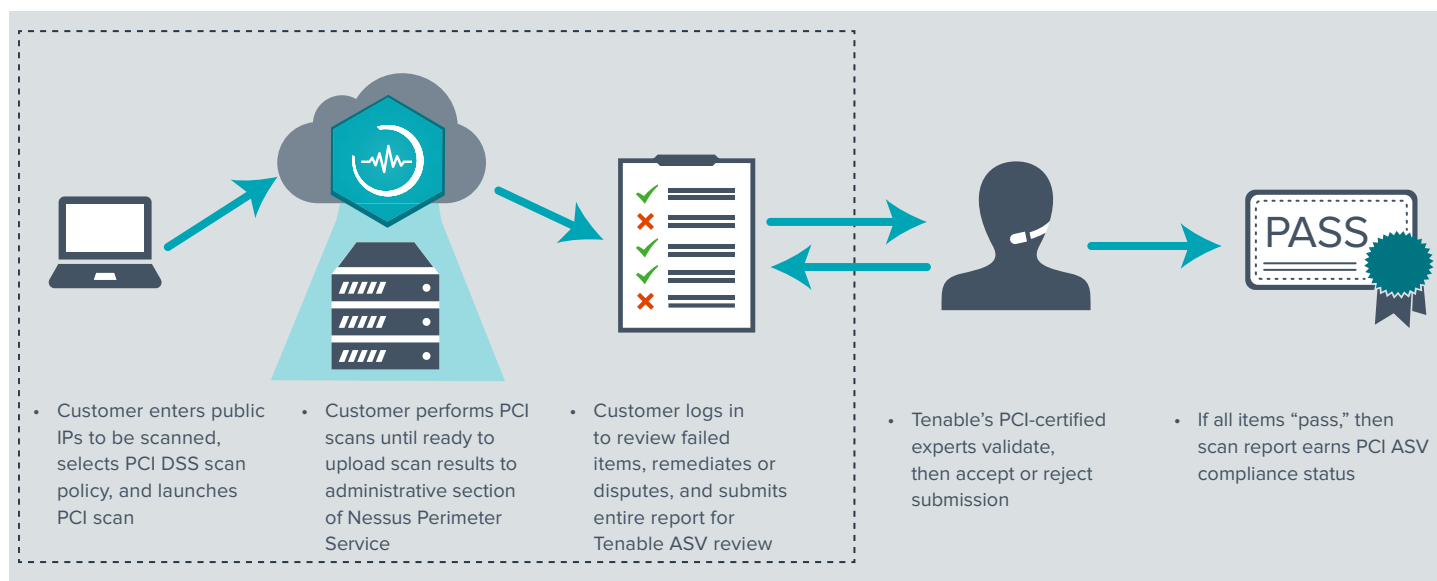

Protects payment card data and certifies PCI ASV compliance

Benefits

- **Based on the Nessus vulnerability scanner:** Perimeter Service scanning is accurate, proven, and fully supported
- **Eliminates the cost and overhead of managing several products and vendors:** Consolidated vulnerability scanning and PCI ASV validation
- **One flat fee for affordable PCI compliance:** Scan an unlimited number of Internet-facing systems, as often as you like, and submit up to two PCI scans per calendar quarter
- **Minimizes overhead:** No software to deploy or maintain
- **Improves efficiency:** Anytime, anywhere access via web browser
- **Continuous monitoring and centralized intelligence for PCI compliance:** Integrated with Tenable’s Unified Security Monitoring™ platform

Nessus Perimeter Service with Tenable PCI Scanning Service

Unlimited Scanning for One Low, Flat Fee

Pay one flat annual fee and scan an unlimited number of Internet-facing IP addresses covering a wide variety of devices, including desktop computers, laptops, and servers, as often as you like. Submit up to two PCI scans per calendar quarter for Tenable PCI ASV validation.

Tenable for PCI Compliance

Using Nessus and Nessus Perimeter Service together with Tenable SecurityCenter, Tenable Passive Vulnerability Scanner™ (PVS), and Tenable Log Correlation Engine™ (LCE) creates a Unified Security Monitoring (USM) environment which offers continuous monitoring and centralized intelligence for PCI compliance.

- Continuously monitor and discover new devices on the network that may create PCI exposure
- Secure log aggregation and storage, log normalization, and search for compliance monitoring
- Real-time visibility into in-scope PCI-relevant assets, reducing the time and resources required for regular scans
- Dashboards and PCI compliance trending, providing an integrated view of risk exposure and how your PCI compliance has changed over time

Scalability, unlimited scanning, PCI ASV validation, and integration with Tenable's USM platform make Nessus Perimeter Service ideal for large organizations or complex networks.

Nessus Auditor Bundles

Nessus training and certification are available. Tenable has assembled several Nessus Auditor Bundles that combine subscriptions for Nessus Perimeter Service, Nessus, or both subscriptions, with Nessus On-Demand Training and a Certification Exam at a significant cost savings.
